RESOLVED ISSUES

- Ticket #51345 – addressed a high security vulnerability that, under certain limited configuration scenarios, could result in passwords for interfaces and environments being stored in plain text rather than encrypted at rest. Password handling has been enhanced to ensure consistent encryption at rest.

As a precaution, customers are strongly recommended to rotate any passwords that may have been stored under the affected conditions. For the highest level of security, we also recommend using a Secret Manager for password storage, which remains our preferred approach for securely managing credentials.
