TDM V8.0 HOT FIX 1 RELEASE NOTES

These Release Notes describe the new features/improvements in TDM release V8.0 HF1 and list bugs that have been fixed since the V8.0 release.

Certification of this TDM release is based on:

- Fabric 7.1 HF2
- PostgreSQL 13

MAIN FEATURES AND IMPROVEMENTS

- Support of data generation parameter names with spaces and/or special characters.
- Fixing of the display of the Task's entities' hierarchy in the *Task Execution - Detailed Statistics* window.
- Fixing of the display of the Custom Logic's mandatory parameters.
- Fixing of the presentation of data generation parameters, with a Constant Distribution type, for a proper display when opening a Generate task. This improvement avoids asking the user to set the parameter's type whenever opening a task with such parameters.
- Fixing the zero value in the Constant data generation parameter.
- Fixing of the task's environment setting before extracting the task's entities when running an Extract task with a **Select a predefined entity list** selection method (Freshdesk ticket https://k2view.freshdesk.com/a/tickets/35038).
- Fixing the Upgrade script - updated the retention period to 'Do not Delete' for tasks with a retention period of 0.
- Fixing the population of the TDM relation tables to always be updated by the LUI sync.
