

TDM V9.0.5 RELEASE NOTES

- These Release Notes describe the new features in TDM release V9.0.5 and list bugs that have been fixed since the V9.0.4 release.
- Certification of this TDM release is based on:
 - Fabric 8.0 HF4
 - PostgreSQL 15

MAIN FEATURES AND IMPROVEMENTS

- The task execution configuration has been enhanced with a test connection control. The startTask API can now either enable or disable the test connection validation based on a new Global: *TDM_SUPPRESS_TEST_CONNECTION*. By default, the test connection validation is enabled (Global value is 'false'). TDM 9.0.5 adds the option to disable the test connection validation by setting the *TDM_SUPPRESS_TEST_CONNECTION* Global to 'true'. This Global can be set on either the environment or a task level.
