

TDM V9.0.4 RELEASE NOTES

- These Release Notes describe the new features in TDM release V9.0.4 and list bugs that have been fixed since the V9.0.3 release.
- Certification of this TDM release is based on:
 - Fabric 8.0 HF2
 - PostgreSQL 15

MAIN FEATURES AND IMPROVEMENTS

- TDM portal - fixing the tester's permission to execute a task: Enabling a tester to execute a task if both testers - the task's creator and executor - are assigned to the same TDM permission set of the task's environment(s) even if they belong to different Fabric roles (ticket #38994).
- Task scheduling –
 - Fixing the scheduling execution error. The error occurred due to an incorrect parsing of the task's user roles when checking the user's permissions (ticket #38936).
 - TDM portal – do not set scheduler with the default setting if the user opens the Scheduler tab but does not edit its attributes (ticket #38939).
- Fixing the execution of a Delete only task when the task's policy for fetching data is getting available data in the Test data store (do not sync the data from the source environment).
- Fixing the population of the <LU>_params table when the LU has no business parameters to enable a proper Select of entities for a Random selection method.
- TDM task – fixing the selection of the related Systems when the user changes the task's Business Entity (BE).
